problems or solutions of the AMC 12 during the period when students are eligible to participate seriously jeopardizes the integrity of the results. Dissemination via copier, telephone, email, internet or media of any type during this period is a violation of the competition rules.

Annual AMC 12 B

Solutions 2001 52th AMC 12 3 7. (A) Let n be the number of full-price tickets and p be the price of each in dollars. Then $np + (140 \text{ in}) \text{¢ } p = 2001$, so $p(n+140) = 4002$: Thus $n + 140$ must be a factor of $4002 = 2 \text{ ¢ } 3 \text{ ¢ } 23 \text{ ¢ } 29$. Since $0 < n < 140$, we have $140 < n + 140 < 280$, and the only factor of 4002 that is in the required range for $n + 140$ is $174 = 2 \text{ ¢ } 3 \text{ ¢ } 29$.
