## **Building Progressive Web Apps**

[Previous](#) ; [Overview: Progressive](#); [Next](#) ;  
In the last article, we read about how the example application, js13kPWA, works offline thanks to its service worker, but we can go even further and allow users to install the web app on mobile and desktop browsers that support doing so. The installed web app can then be launched by users just as if it were any native app.

## **How to make PWAs installable - Progressive web apps (PWAs) | MDN**

A2HS is thought to be part of the Progressive Web App philosophy — giving web apps the same user experience advantages as native apps so they can compete in today's

ecosystem wars. Part of this is the simple gesture of accessing an app by tapping its icon on your Home screen, and then having it appear neatly in its own window.

## **Add to Home screen - Progressive web apps (PWAs) | MDN**

As you can see, we can trigger the native installation popup by using the `deferredPrompt.prompt()` and then we can wait (“await”) for the user selection in the form of `deferredPrompt.userChoice..` This will return the user choice as outcome. If the user chooses to install the application, the outcome would be “accepted” and then we can set `deferredPrompt` to null so that it won't trigger ...
