Cataloguing In Library Science

In library and information science, cataloging or cataloguing is the process of creating metadata representing information resources, such as books, sound recordings, moving images, etc. Cataloging provides information such as creator names, titles, and subject terms that describe resources, typically through the creation of bibliographic records. The records serve as surrogates for the stored information resources.

PURPOSES AND FUNCTIONS OF A LIBRARY CATALOGUE The main purpose of a library catalogue is to aid readers in making use of the collection of the library by providing author, subject, title and other approaches to the collection. The primary purpose of a library catalogue is to serve as a guide to the collection of materials. Basically, it reveals to the users the document or non- document materials contained in the library and aids them in finding out whether the materials of their interest are ...

Theory of Library Cataloguing - LinkedIn SlideShare

Each bibliographic record is given one or more access points through which the record can be retrieved. For a cataloging record, an access point is presented in the form of a heading added to the description. Each heading applied to a record then results in a catalog entry. The basis for the access point may be the subject content of the work.

Cataloguing Access Point - Library & Information Science ...

A Cataloging in Publication record (aka CIP data) is a bibliographic record prepared by the Library of Congress for a book that has not yet been published. When the book is published, the publisher includes the CIP data on the copyright page thereby facilitating book processing for libraries and book dealers.
