COVID-19 Clinical Trials: From Concept to Results. Speaker: Professor Peter Horby 13 Aug 2020 . As part of the “COVID-19 Updates from Singapore” webinar series, Professor Peter Horby from the University of Oxford shares his experience in conceptualising and implementing large controlled trials globally.

COVID-19 Clinical Trials: From Concept to Results

However, clinical trials also have the potential to pose unknown risks to their participants, and biased knowledge extracted from flawed clinical trials may lead to the inadvertent harm of patients. Although conducting a well-designed clinical trial may appear straightforward, it is founded on rigorous methodology and oversight governed by key ethical principles.

Key Concepts of Clinical Trials: A Narrative Review

Titled COVID-19 Clinical Trials: From Concept to Results, Prof Horby started the webinar by introducing the International Severe Acute Respiratory and Emerging Infection Consortium, which was first formed in 2009 after the less-than-satisfactory efforts to run clinical trials during the 2009 Influenza pandemic.

Introduction. Blinding is a procedure in which one or more parties in a trial are kept unaware of which treatment arms participants have been assigned to, in other words, which treatment was received. Blinding is an important aspect of any trial done in order to avoid and prevent conscious or unconscious bias in the design and execution of a clinical trial.
