Different Methods And Strategies

Forests are biologically diverse systems, representing some of the richest biological areas on Earth. They offer a variety of habitats for plants, animals and micro-organisms. However, forest biodiversity is increasingly threatened as a result of deforestation, fragmentation, climate change and other

UPM safeguards biodiversity in its own forests through the implementation of its biodiversity program.

The biodiversity program was established in 1998 and covers environmental guidelines concerning operational activities, forest conservation and collaboration projects with stakeholders.
