A study has been in place since 1958 studying the wolf/moose interaction on Isle Royale in Lake Superior after those animals naturally migrated there, perhaps on winter ice. Hajji and others, and Hundertmark & Van Daele, studied the current population statuses of past founder effects in Corsican red deer and Alaskan elk, respectively.

### Founder effect - Wikipedia

A myriad of factors determines the success of a population. Geneticists consider inbreeding an important detrimental factor. A well-known example is provided by the isolated population of wolves in Isle Royale in the United States. Inbreeding and the resulting exposure of harmful mutations have brought this population to the brink of extinction.

1. Isle Royale National Park consists of a series of islands located in Lake Superior. Initially, there were no wolves on any of the islands since they were in the middle of Lake Superior. However, in 1949 an unusually long and cold winter produced an ice bridge between Canada and the islands of the National Park.

The British men in the business of colonizing the North American continent were so sure they "owned whatever land they land on" (yes, that's from Pocahontas), they established new colonies by simply drawing lines on a map. Then, everyone living in the now-claimed territory, became a part of an English colony. A map of the British

### The Mason-Dixon Line: What? Where? And why is it important?

IDM/UCT involvement is a minor component of an external study, for example: laboratory analysis of non-endpoint assays for samples collected at non-UCT sites. Protocol is a sub-study of a previously IRC and UCTHREC reviewed and approved protocol that is carried out in the same study population with expansion of the same aims and interventions.
