leachate is released to an onsite treatment facility or off-site wastewater treatment plant. Some landfills recirculate the leachate into the landfill so it soaks into the waste and does not reappear. This reduces the amount of leachate in the landfill, but increase the concentration of contaminants.

How Do Landfills Work? (Animated Guide) - BigRentz

Wastewater treatment is a process used to remove contaminants from wastewater and convert it into an effluent that can be returned to the water cycle. Once returned to the water cycle, the effluent creates an acceptable impact on the environment or is reused for various purposes (called water reclamation). The treatment process takes place in a wastewater treatment plant.

environmental applications.

Granular Activated Carbon - Calgon Carbon Corporation

Industrial wastewater treatment describes the processes used for treating wastewater that is produced by industries as an undesirable by-product. After treatment, the treated industrial wastewater (or effluent) may be reused or released to a sanitary sewer or to a surface water in the environment. Some industrial facilities generate wastewater that can be treated in sewage treatment plants.
