2.1.3 Load Balancing Remote Desktop Connection Broker. The Microsoft Remote Desktop Connection Broker (RD Connection Broker) role has two responsibilities. First, since Windows Server 2012 the RD Connection Broker role always handles the initial RDP connection and sends the session to the RD Session Host with the least load.

Remote Desktop Services - Kemp Support

Is IIS 7 different to IIS 6 as far as web gardens load balancing is concerned? Does it make any difference which application type is used? I mean WCF and usual web services. In many cases, settings from machine.config and web.config that are applied to web services do not affect WCF services. But for now I'm interested in load balancing only.

Web garden load balancing : The Official Microsoft IIS Forums

Load balancing Microsoft IIS Microsoft Internet Information Services (IIS) is a high performance, flexible web server created by Microsoft for use with Windows. In order for web sites to remain available, IT managers will need to configure IIS server load balancing.

Load balancing Microsoft IIS - Loadbalancer.org

Our general recommendation for achieving high-availability of Internet Information Services (IIS) servers is by using Network Load Balancing (NLB) since the servers tend to be hosts for stateless requests - a customer will visit a website, access content, then leave, and it doesn't matter which server hosts the website.

IIS 7.5 High Availability and Load Balancing
