modern biology chapter 16 Flashcards and Study Sets | Quizlet

Modern Theory of Evolution. The neo-Darwin view of evolution incorporates modern understanding of population genetics, developmental biology, and paleontology, to which is being added knowledge of the molecular sequencing of DNA and the insights it provides concerning the phylogeny of life. The major premises of the genetic (synthetic) theory of evolution are: evolution is the change of gene (allele) frequencies in the gene pool of a population over many generations; species (and their ...

Modern Theory of Evolution - CliffsNotes Study Guides

Principles. The study of biology works from several basic foundations: 1. The cellular theory of life. All life is composed of at least once cell, which undergoes the classical processes of cellular life, such as reproduction; the cell is the basic unit of all macrobiotic life.The chemical composition of all cells in nature is similar, and all existing cells have emerged from prior cells ...
