A perimeter allows free communication within the perimeter but, by default, blocks communication to Google Cloud services across the perimeter. The perimeter does not block access to any third-party API or services in the internet. Here are some examples of VPC Service Controls creating a security boundary:

Overview of VPC Service Controls | Google Cloud

To find the perimeter of any rectangle, add all of the sides up: $20 + 20 + 12 + 12 = 64$ inches You could use this formula as well:, where P = perimeter, l = length, w = width. This formula comes from the fact that there are 2 lengths and 2 widths in every rectangle.

How to find the perimeter of a rectangle - Basic Geometry

The perimeter layer meant for protecting the systems hosted inside the data center is the physical layer. Practices of protection at the physical layer include access controls for data center rooms, racks, servers and entry processes. ...
