In partnership with the University of Toledo's Center for Creative Instruction, McGraw Hill launched the first-of-its-kind virtual dissection tool in 1997: Anatomy & Physiology Revealed® (APR). APR utilizes cadaver photography to provide students with a realistic experience and the ability to practice and understand dissection 24/7—without the physical resources of a cadaver.

External beam radiotherapy (EBRT) is the most common form of radiotherapy (radiation therapy). The patient sits or lies on a couch and an external source of ionizing radiation is pointed at a particular part of the body. In contrast to brachytherapy (sealed source radiotherapy) and unsealed source radiotherapy, in which the radiation source is inside the body, external beam radiotherapy directs ...

External beam radiotherapy - Wikipedia

Soft-tissue lesions are frequently encountered by radiologists in everyday clinical practice. Characterization of these soft-tissue lesions remains problematic, despite advances in imaging. By systematically using clinical history, lesion location, mineralization on radiographs, and signal intensity characteristics on magnetic resonance images, one can (a) determine the diagnosis for the ...
