This example had a couple of points other than finding roots of functions. The first was to remind you of the quadratic formula. This won't be the last time that you'll need it in this class. The second was to get you used to seeing "messy" answers. In fact, the answers in the above example are not really all that messy.

A rational function  $f(x)$  has the general form shown below, where  $p(x)$  and  $q(x)$  are polynomials of any degree (with the caveat that  $q(x) \neq 0$ , since that would result in an undefined function). Note that all polynomials are rational functions (a polynomial is a rational function for which  $q(x) = 1$ ), but not all rational functions are polynomials ...

In this chapter we introduce sequences and series. We discuss whether a sequence converges or diverges, is increasing or decreasing, or if the sequence is bounded. We will then define just what an infinite series is and discuss many of the basic concepts involved with series. We will discuss if a series will converge or diverge, including many of the tests that can be used to determine if a ...
