Multiple Imputation in SAS Part 1 - stats.oarc.ucla.edu

Is the LDM method any good? A major reason for concern: •LDM assumes multivariate normality of the predictors. •Few applications will meet that assumption, or even come close.

Better Predicted Probabilities - Stata

Factor analysis is a statistical method used to describe variability among observed, correlated variables in terms of a potentially lower number of unobserved variables called factors. For example, it is possible that variations in six observed variables mainly reflect the variations in two unobserved (underlying) variables.
