Spiders (order Araneae) are air-breathing arthropods that have eight legs and chelicerae with fangs able to inject venom. They are the largest order of arachnids and rank seventh in total species diversity among all orders of organisms.

Spider - Wikipedia

Spiders can generally be identified by the type of web they create though not all webs are used to capture prey. Some are used in courtship rituals while others are used to secure egg sacs. Silk is produced by specialized glands found in the abdomen of the spider that are formed of liquid protein generated within the body.

North American Spiders - InsectIdentification.org

Spiders get a bad rap. These creepy-crawlies often appear in horror movies, haunted houses and, worst of all, inside our homes where they are usually met with shrieking and the bottom of a shoe. It's easy to understand why people cringe at the sight of a spider on the wall.

Spiders 101: Types of Spiders & Spider Identification

Hunting spiders is the catch all term for all types of spiders that do not spin webs to catch prey. Wolf spiders, jumping spiders and crab spiders might be the most common hunting spiders found around the neighborhood. Often the jumping spiders and crab spiders hang out on flowers and plants seeking an unsuspecting insect to stop by.
