The Human Brain: Surface, Three-Dimensional Sectional

...

The human brain controls nearly every aspect of the human body ranging from physiological functions to cognitive abilities. It functions by receiving and sending signals via neurons to different parts of the body. The human brain, just like most other mammals, has the same basic structure, but it is better developed than any other mammalian brain.

Human Brain - Structure, Diagram, Parts Of Human Brain

The adult human brain weighs on average about 1.2–1.4 kg (2.6–3.1 lb) which is about 2% of the total body weight, with a volume of around 1260 cm³ in men and 1130 cm³ in women. There is substantial individual variation, [6] with the standard reference range for men being 1,180–1,620 g (2.60–3.57 lb) [7] and for women 1,030–1,400 g (2.27–3.09 lb).

Human brain - Wikipedia

Like all vertebrate brains, the human brain develops from three sections known as the forebrain, midbrain and hindbrain. Each of these contains fluid-filled cavities called ventricles.

Human Brain: Facts, Functions & Anatomy | Live Science

The cerebral cortex is folded in a way that allows a large surface area of neural tissue to fit within the confines of the neurocranium. When unfolded in the human, each hemispheric cortex has a total surface area of about 0.12 square metres (1.3 sq ft). The folding is inward away from the surface of the brain, and is also present on the medial surface of each hemisphere within the longitudinal ...
